Sample Aptitude Question with Full Solution

Let’s walk through a typical numerical ability problem often found in aptitude PDFs.

Question: If the average of five numbers is 12, and one of the numbers is 20, what is the average of the remaining four numbers?

1. Compute the total sum of the five numbers: 12 × 5 = 60.
2. Subtract the known number: 60 – 20 = 40.
3. Divide the remaining sum by 4: 40 ÷ 4 = 10.

Answer: The average of the remaining four numbers is 10.

Common Mistakes to Avoid

- Time Mismanagement – Spending too long on one question can jeopardise the entire test.
- Skipping Instructions – Overlooking subtle wording differences can lead to incorrect answers.
- Relying on Intuition – Guessing without a systematic approach often results in lower accuracy.
- Ignoring Patterns – Failing to identify series or logical patterns wastes valuable time.
- Not Reviewing Mistakes – Missing the opportunity to learn from errors prevents improvement.
